What happens to resources once in the correct wheelie bins?

Food & Heavily Soiled Packaging

- Residual by-products from this process are used to generate a coal replacement fuel.

Anaerobic digestion

- 1 tonne of food will create 300 kwh of energy.

Resource Recovery

- Upward of 80% of all resources that are put into this bin are recycled back into the circular economy for reuse.

- Items that can't be recycled are used to generate coal replacement fuel.
